

Ascot Lean-To Fabric Clad

The Ascot design uses a single rolled tubular box section for the roof arches giving a clean line to the roof. The lean-to format can be used to butt up to existing walls or over sail existing roofs and gutters without creating an additional roof valley. The roof of the canopies can either be clad with flame retardant waterproof fabric or polycarbonate.

Warranties

Framework - 25 years
Fabric Cladding - 10 years against premature degradation

Sizes

The maximum width for the Ascot is around 6m but each canopy as fabricated to suit the clients requirements.
